

Astonishing penetrability of Nature

A. Hrynkiewicz

*The Henryk Niewodniczański Institute of Nuclear Physics
Radzikowskiego 152, 31-342 Kraków, Poland*

Albert Einstein used to say that the most intriguing thing about Nature is that can be understood by human beings.

Indeed, it is exciting to consider how does it happen, that the power of human consciousness and mind make it possible to penetrate so vast and complicated Universe. It is especially astonishing when we take into account that our sensual perception, being an unique contact with Nature, is limited, imperfect and has a very small range of response to the external stimuli.
